

## Connecting Securely from Anywhere

Traditionally, Kaba's CenTran software has given users the ability to automate various Cencon features, such as code generation and distribution through third-party dispatching software. With the use of a third party IVR system or CenTran Appliance, CenTran v5.1, with its Windows® Service feature, enables remote operations. CenTran's Web Service lets field personnel receive their One Time Combination via text or email, eliminating time-sensitive contact with dispatch personnel. The new Interconnect Box for network/line power connection to the ATM PC, used in conjunction with CenTran Web Service and ATM-side CenTran Agent software, allows users to remotely activate, audit, shelf, and manage Cencon Locks. By installing Kaba's new Key Box Agent software, you can manage keys and users remotely too!

### Here are just some of the remote operations available via the CenTran API

- » Add User Key
- » Audit Query
- » Dispatch Locks
- » Lock Remote Activate
- » Lock Remote Set Access
- » Lock Remote Shelf
- » Reassign Locks
- » Route Add
- » Route Query
- » Update Locks
- » Update User
- » User Query

## Streamline Operations and Reduce Costs

Today, when an ATM security breach occurs, retrieving the audit is a multi-step process that involves multiple people and additional expense. Cencon O2 allows a Security Director to remotely log into the lock and retrieve the audit in a matter of seconds.

Emergencies happen. When they do Cencon O2 allows technicians to create keys and a code from the field without heading to the office first.
